                                  structure stored in the computer readable storage medium, the data structure including information resident in a database used by the application programme and including records, each record comprising information identifying a polymorphism shown in the above sequences. products and methods can be used for analysing polymorphic sites in individuals for testing for the presence of a disease phenotype or inforensics, paternity testing or genetic mapping of phenotypic traits. They can also be used for the production of polypeptides expressed by variant genes and for the production of transgenic animals. The nucleic segments can also be used in the manufacture of medicaments for the production of transgenic animals.
                                                                                                                                                                         Sequences AAX06101-X06558 represent human DNA fragments which contain biallelic polymorphic markers. The base occupying the polymorphic site indicated by the appropriate IUPAC-IUB ambiguity code. These fragments can be used in a method for determining polymorphic forms in an individual. The invention further provides computer-readable storage medium for storing data for access by an application programme being executed on a data processing system. Such a method comprises a data
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAX06134 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequence represents a PCR primer for DNA encoding the human he he invention, designated RecQ5. The helicase RecQ5 gene can be usenthod for the diagnosis of diseases caused by an abnormality case gene. The gene can be used in researching the relationship een the maintenance of human homeostasis and cell aging

The invention discloses a microarray comprising a plurality of nucleic acid probes including one of 2,018,500 fully defined sequences, or its perfect match, perfect mismatch, so matched the nucleic also disclosed is a method of gene expression analysis. The array is used in monitoring gene expression levels by hybridisation to a DNA library, in analysis of genetic variation or in hybridisation of tag-labelled compounds. The nucleic acid probes are specifically designed for analysis of at least one target sequence. The method of analysis comprises of at least one target sequence of a method of analysis comprises of at least one target sequence.
                                                                                                                                                                                                                            WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a primer used to isolate a polynucleotide encoding a human RecQ5 type DNA helicase. The three RecQ5 type helicases alpha, beta and gamma are formed by alternative splicing. The invention discloses the RecQ5 type DNA helicases beta and gamma, and the genes encoding them. The RecQ5 beta DNA helicase has a novel characteristic of being localised in the nucleus. It is useful as a diagnostic marker or in
                                                                                                                                                                 New array of nucleic acid probes, useful for Southern, Northern or dot-blot hybridization sequence or specific mutations of any gene.
                                                                                                                                          Claim 1;

expression profile of a cancer cell, predicting the effect of a cytotoxic agent on a cancer cell obtained from a mammalian subject and identifying/characterizing an agent that modulates the expression or activity of one or more chemosensitivity genes. The array and methods are useful for identifying the chemosensitivity gene profile of a cancer cell or for determining the chemosensitivity of cells to cytotoxic agents. These may also be used for identifying and characterizing new agents that modulate the chemosensitivity of cancers. The present sequence is a control probe used in the microarray of the invention, an RGS (not

The invention relates to an array for determining the chemosensitivity of a cancer cell to a particular agent comprising a population of polynucleotide probes designed to be complementary to and hybridize under stringent conditions with a target region of at least one gene listed in the specification, where at least one of the polynucleotide probes is a control probe. Also included are detecting a chemosensitivity gene expression profile of a cancer cell, predicting the effect of a cytotoxic

microorganisms using at least one of 1138 oligonucleotide probes fully defined in the specification. The method is especially used to detect beverage-spoiling microorganisms in alcohol-free beverages, for example fruit-based drinks or water, but may also be extended to analysis of soil, plant parts, waste water, silage, clinical samples (feces, blood or tissues), foods, cosmetics and pharmaceuticals. The method provides rapid (1-2 days, compared to up to 10 days for classical culture methods) and specific detection of spoilage microorganisms. It combines the advantages of classical fluorescent in situ hybridization with those of culture
                                                                                                                                                                                           Detecting alcoholic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      methods, can differentiate between closely related organisms, is suitable for screening large numbers of samples and allows simultaneous detection of several different microorganisms. The present sequence is that of an oligonuclectide probe which may be used for detecting beverage-spoiling microorganisms in the method of the invention.
                                                                                                                                                                                                The invention relates to a human gene RecQ4 encoding a protein having helicase activity. The gene has significant homology to the Escherichia coli helicase gene (RecQ). Host cells transformed with vectors comprising the RecQ4 gene are used for the recombinant expression of the protein.

The recombinant expression of the protein which recombinant expression of the protein in which we have a simple control of the study and diagnosis of disorders in which recombinant expression of the protein in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and diagnosis of disorders in which recombinate the study and disorders in which recombinate the study and disorders in which recombinate the study are study as the study and disorders in which recombinate the study are study as the study and disorders in which recombinate the study are study as the study as the study as the study are study as the study as the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a system for detecting gene expression, which comprises one or two isolated DNA molecules that detect expression of a gene, where the gene corresponds to any of 8143 oligonucleotides (ABZ00010-ABZ08152) each having 50 base pairs (bp). The system is useful for leukocyte expression profiling. It is particularly useful for diagnosing a disease, monitoring (rate of) progression of a disease, predicting therapeutic outcome, determining prognosis for a patient, predicting disease complications in an individual or monitoring response to treatment in an individual. The diseases include cardiac allograft rejection, kidney allograft rejection, liver allograft rejection, atherosclerosis, congestive heart failure, systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis or cytomegalovirus infection
                      Constructing strains for identifying gene products as effective targets for therapeutic intervention, by inactivating in the strain one allele of the gene and placing other allele of the gene under conditional expression
                                                                                                                                                                                                                                                                                                                                                                 26-DEC-2001; 2001WO-US049486
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                proliferation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Fungus; yeast; tetracyclin;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC promoter, (MI) is useful for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The diploid fungal CC cells in which both alleles modified are useful for identifying a gene that cells in which both alleles modified are useful for identifying a gene that CC contributes to the survival or growth of a fungus, a gene that CC contributes to the resistance of a diploid fungus to an antifungal agent that inhibits the growth of a diploid fungus CC and for identifying a therapeutic agent for treatment of a mammalian CC and for identifying a therapeutic agent for treatment of a mammalian CC and for identifying a therapeutic agent for treatment of a mammalian CC compound catabolism, biosynthetic, transporter, transcriptional, CC translational, signal transduction, DNA replication and cell division CC compound catabolism, biosynthetic, transporter, transcriptional CC cativity. The method is useful for identifying a compound having the CC ability to inhibit growth or proliferation of C. albicans cells and for CC treating infection by C. albicans. The present sequence is that of a PCR CC primer used in the method of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based CC on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The aptamers are also useful in quantitating targets present in complex matrices. The aptamers are used to develop highsensitivity affinity probe capillary electrophoresis (APCE) assays, in BLISA type assays using enzyme-linked DNA aptamers. Thrombin aptamers me developed for using fibre-optic microarray biosensors. Aptamers against transformed endothelial cells may be selected for use as histological markers to identify tumour microvessels. Aptamers may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         having a region of randomised sequence by contacting the mixture with the target molecule, where nucleic acids having affinity to the target molecule are partitioned from the mixture by capillary electrophoresis, amplifying increased affinity nucleic acids to yield a ligand-enriched mixture of nucleic acids. The invention may be useful for the production of compounds with an antiasthmatic, cerebroprotective, anti-HIV or virucide activity. The method is useful for identifying nucleic acid ligands of a target molecule from a candidate mixture comprised of single stranded nucleic acids each having a region of randomised sequence. Aptamers identified by the method are useful as a tool in analytical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                developed for use in other aptamer-based assays, such as assays for analytes ranging from anthrax spores to cocaine. Aptamers having improved quality, improved binding efficiency and selectrivity can be identified by the method of the invention. The present sequence is that of an aptamer DNA sequence which was identified using the method of the invention.

                                                                                 Query Match
                                                                                                                                                                                             AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their nucleotide sequences. AAZ69579 to AAZ77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a membrane scaffold protein (MSP), that self CC assembles in the absence of phospholipid, with a phospholipid or a CC mixture of phospholipids, into a nanoscale particle of 5-500 nm in CC diameter, in an aqueous environment, where the membrane scaffold protein CC comprising MSP is useful for identifying a competitor of binding of a CC ligand to a receptor protein which is incorporated within the nanoscale particle compound, and measuring detectable ligand released from the particle. CC bound detectable ligand, contacting the bound ligand with a test CC compound, and measuring detectable ligand released from the particle, CC such that a competitor of ligand binding is identified when contacting the bound ligand with a test CC compound; are sults in release of the detectable ligand. The CC invention is useful for the incorporation of additional hydrophobic or partially hydrophobic protein molecules. The nanoscale particle can form CC tags for purification and physical manipulation of disks such as in CC particle and MSP are useful in biotechnology, pharmaceutical industries for rapid and reproducible assay and crystallisation. The nanoscale cand in research areas. The nanoscale particle is useful for structure/ CC discovery. The present sequence is a synthetic oligonucleotide used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

cc is amphipathic and forms at least one alpha helix. The nanoscale particle comprising MSP is useful for identifying a competitor of binding of a cc ligand to a receptor protein which is incorporated within the nanoscale particle together with MSP, by contacting nanoscale particle and a creeptor protein with a detectable ligand to produce nanoscale particle and creeptor protein with a detectable ligand to produce nanoscale particle. Cc compound, and measuring detectable ligand released from the particle, cs with that a competitor of ligand binding is identified when contacting cthe bound ligand results in release of the detectable ligand. The creeptor particle is useful for the incorporation of additional hydrophobic or partially hydrophobic protein molecules. The nanoscale particle can form cc tags for purification and physical manipulation of disks such as in the particle and MSP are useful in biotechnology, pharmaceutical industries can discovery. The present sequence is a synthetic oligonucleotide used to constation and drug constation and drug the present sequence is a synthetic oligonucleotide used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a membrane scaffold protein (MSP), that self assembles in the absence of phospholipid, with a phospholipid or a mixture of phospholipids, into a nanoscale particle of 5-500 nm in diameter, in an aqueous environment, where the membrane scaffold protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       biological research, self assembles with(out) phospholipids into nanoscale particle in an aqueous environment.

CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a composition of useful for preventing or cc treating a respiratory, lung or malignant disease. The administered cc composition comprises oligo and is administered to reduce the production cc availability, or to increase the degradation of the target mRNA or to creduce the amount of target polypeptide present in the lungs. The cpulmonary obstruction, and/or bronchoconstriction and/or lung cc inflammation, allergies and/or surfactant hypoproduction are associated confinemation, allergies, asthma, impeded respiration, respiratory cc inflammation, allergies, asthma, impeded respiration, respiratory cc inflammation, allergies, asthma, impeded respiration, respiratory cc hypothesison, emphysema, chronic obstructive pulmonary disease, pulmonary ctransplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to cthymidines present in the target RNA serves to prevent the breakdown of cc the oligonucleotides into products that free adenosine into the system ce.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to corresponding to the anti-sense oligos or breakdown of constant of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system cc.g. rung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallargic, antiinflammatory, antiasthmatic.
                                                                                                                                                                                                                                                                                                   ss; primer; antibacterial; antiinflammatory;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
The invention relates to a purified secreted Chlamydia polypeptide or its cragment. The Chlamydia polypeptide is homologous to one or more chlamydia pneumoniae proteins selected from CPn0104, CPn0210, CPn0399, CPn0405, CPn0443, CPn0480, CPn0489, CPn0490, CPn0497, CPn0522, CPn0399, CPn0582, CPn0588, CPn05895, CPn0671, CPn0673, CPn0681, CPn0712, CPn0720, CPn0725, CPn0729, CPn0729, CPn0729, CPn0729, CPn0729, CPn0746, CPn0770, CPn0714, CPn0779, CPn0879, CPn0879, CPn0879, CPn0939, CPn1002, CPn1005, CPn1007, CPn10019, CPn1002, CPn1002 and CPn1068. Alternatively, CPn1005, CPn1007, CPn1019, CPn1002, CPn1003 and CPn1068. Alternatively, CPn1004, CPn1070, CPn1005, CPn1007, CPn1019, CPn1002, CPn1032 and CPn1068. Alternatively, CPn1005, CPn1007, CPn1019, CPn1003, CPn1032 and CPn1068. Alternatively, CPn1005, CPn1007, CPn1019, CPn1032 and CPn1068. Alternatively, CPn1005, CPn1007, CPn1019, CPn1003, CPn1003, CPn1003, CPn1003, CPn1002, CPn1003, CPn1003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a bacterial strain, particularly an Escherichia CC coli strain for the secretion of soluble, biologically active recombinant heterologous proteins into the periplasm or culture medium. The bacterial strain expresses a fusion protein comprising a signal peptide, a mature heterologous protein, and a bacterial surface protein subunit simultaneously with a periplasmic chaperone and an outer membrane protein cusher/secretin protein, both of which are specific for the surface protein subunit component of the fusion protein. In particular, the signal peptide and surface protein subunit are from the Yersinia pestis CC signal peptide and surface protein subunit are from the Yersinia pestis CC signal peptide and surface protein subunit are from the Yersinia pestis CC signal peptide and surface protein subunit are from the Yersinia pestis CC strain of the invention is useful for producing heterologous recombinant protein such as granulocyte macrophage-colony stimulating factor (GM-CSF), interleukin-1-beta (IL-1-beta), and IL-1 receptor antagonist (IL-CC lra). The present sequence represents a Yersinia pestis CafIM PCR primer county and in an exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                      Contribution codon, coding region, 5' or 3' end genomic flanking regions, cc 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of cc junctions of genes encoding a polypeptide associated with lung and/or cc nasal airway dysfunction and a second active agent comprising an cc antiinflammatory steroid and ubiquinone. A composition of the invention cc antiinflammatory, antiallergic, antiasthmatic, hypotensive, c immunosuppressive, and cytostatic activity. The composition may have a cc use in antisense gene therapy. The composition is useful for treating or cc preventing a respiratory, lung or malignant disease or condition, also cc for enhancing the prophylactic or therapeutic respiratory effect of an cc antiinflammatory steroid in a subject, for reducing levels of adenosine cc for reducing sensitivity to adenosine, reducing levels of adenosine cc lung surfactant in a subject's tissue, or treating bronchoconstriction, cc lung surfactant in a subject's tissue, or treating bronchoconstriction, cc sinflammation, lung allergies, or a respiratory disease or condition. Cc Specification, but was obtained in electronic format directly from WIPO or treating treating bronchoconstriction, in the composition of the printed specification, but was obtained in electronic format directly from WIPO or treating the prophylactic or the sequence data for this patent is not represented in the printed or the composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   first active agent

                                                                                                                                                                                                                                                                                                                                                                                  PCR primers DruGen5' (AAT86744) and DruGen3' (AAT86745) are based on a raspberry drul cDNA sequence (see AAT86743). They were used in the PCR amplification of raspberry leaf genomic DNA. A drul genomic clone (see AAT86746) was obtained. Inverse PCR (see (AAT86747-48) was then used to isolate a genomic clone (see AAT86749) that included the drul 5' flanking region. The drul promoter (see AAT86739) is used in claimed chimeric genes for the high-level, tissue-specific expression of heterologous sequences in transgenic plants, especially to modify ethylene productions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  co-suppression; thaumatin; sweetener; sucrose phosphate synthase; lycopene cyclase; polygalacturonase inhibiting protein; glucanase; chitinase; PCR; primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PCR primers DruGen5' (AAT86856) and DruGen3' (AAT86857) are based on a raspberry drul cDNA sequence (see AAT86855). They were used to amplify raspberry genomic DNA, yielding a partial drul clone (see AAT86858). The 5' flanking region of drul was subsequently recovered. Promoters (see AAT86849-51) based on the drul gene promoter are used in claimed chimeric genes to provide constitutive expression of heterologous sequences in transgenic plants, especially to provide selectable markers or to confer herbicide resistance

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pinus radiata
                                                                                                                                                                                                                                                                                          ction. The polynucleotides, polypeptides, DNA construct, composition, methods are useful for modifying plant development and altering plant notype. This sequence represents an oligonucleotide used in the ation of a microarray for detection of cell cycle genes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a nucleic acids and polypeptides encoding four novel splice variant isoforms of human histone deacetylase (HDAC3). The human HDAC3 nucleic acid is useful as hybridisation probes or PCR primer for identifying nucleic acids encoding for proteins related to histone deacetylase, or for the recombinant expression of histone deacetylase. The HDAC3 polypeptides are useful for enhancing an immune response and modulating transcription activity or levels of histone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human histone deacetylase 3 nucleic acid, useful as hybridization probes or PCR primer for identifying nucleic acids encoding for proteins related to histone deacetylase, or for the recombinant expression of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic
                                                                                                                                                                                                                                                                                                                                         methods used for modulating histone deacetylase 2 (HDAC2). The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of histone deacetylase 2, such as a hyperproliferative disorder (cancer), a condition involving an inflammatory response or an aberrant apoptosis and a metabolic disorder. The invention is also useful in antisense-therapy. The present sequence is human histone deacetylase 2 DNA antisense oligonucleotide used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense oligonucleotide compound, useful for diagnosing, preve and/or treating conditions with aberrant activity of the histone deacetylase 2, such as cancer, inflammation and metabolic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                compound is useful for preparing a composition for treating hyperproliferative disorders, e.g., cancer. It is also useful in antisense gene therapy. The present sequence is an antisense oligonucleotide targeted to human HDAC2 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to antisense compounds, compositions and methods for modulating the expression of histone deacetylase 2 (HDAC2). HDAC2 also known as HDAC-2, hdac2, human RPD3 and hRPD3. The composition comprises antisense compounds that can be targeted towards HDAC2. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New compound, having a sequence targeted to a coding region of a nucleic acid encoding human histone deacetylase 2, useful for preparing a composition for treating hyperproliferative disorders, e.g., cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      modified_base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 modified_base

                                                                                                                                                                                                                    The invention relates to antisense compounds, compositions and methods for modulating the expression of histone deactylase 2 (HDAC2). HDAC2 also known as HDAC-2, hdac2, human RPD3 and hRPD3. The composition comprises antisense compounds that can be targeted towards HDAC2. The compound is useful for preparing a composition for treating hyperproliferative disorders, e.g., cancer. It is also useful in antisense gene therapy. The present sequence is an antisense oligonucleotide targeted to human HDAC2 DNA.
                                                                                                                                                                                 Sequence 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New compound, having a sequence targeted to a coding region of a nucleic acid encoding human histone deacetylase 2, useful for preparing a composition for treating hyperproliferative disorders, e.g., cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

HDAC2 is also known as HDAC-2, hdac2, human RPD3 and hRPD3. The composition comprises antisense compounds that can be targeted towards HDAC2. The compound is useful for preparing a composition for treating hyperproliferative disorders, e.g., cancer. It is also useful in antisense gene therapy. The present sequence is human HDAC2 DNA target region. Human HDAC2 gene is located at chromosome 6q21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New compound, having a sequence targeted to a coding region of a nuc acid encoding human histone deacetylase 2, useful for preparing a composition for treating hyperproliferative disorders, e.g., cancer.
   Homo sapiens
                                                                      phosphorothioate

                           The present invention relates to antisense compounds, compositions and methods used for modulating histone deacetylase 2 (HDAC2). The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with
                                                                                          New antisense oligonucleotide compound, useful for diagnosing, and/or treating conditions with aberrant activity of the histor deacetylase 2, such as cancer, inflammation and metabolic disorder.
                                                                                                                                                                                           14-JUN-2002; 2002US-00173192.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention is also useful in antisense-therapy. The present sequence is human histone deacetylase 2 DNA antisense oligonucleotide used in the exemplification of the invention.
                                                                                                                                                         and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of histone deacetylase 2, such as a hyperprobliferative disorder (cancer)
                                                                                                                                                                                                                                                                        New antisense oligonucleotide compound, useful for diagnosing, p and/or treating conditions with aberrant activity of the histone deacetylase 2, such as cancer, inflammation and metabolic disord
